DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2, 3, 6, 10, 14, 17, 21, 23, 32 and 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicants' admissions' (pages 1-5 of instant application) in view of Dean Jr. *et al.* (U.S. Pat. No. 4,978,616)("Dean") for the reasons set forth in the last Office action.

Response to Arguments

Applicant's arguments filed 09/22/03 have been fully considered but they are not persuasive.

Applicant argues that because the present invention is limited to anaerobic fermentation whereby ethanol is a product, the claims are not obvious in view of the prior art. This does not take into account applicant's admissions, whereby beer, an ethanolic product, production relies on the anaerobic fermentation of wort, and said fermentation produces carbon dioxide. They also admit that it is known that the production of foam, that is produced when the carbon dioxide concentration exceeds that saturation point, is a problem for brewers.

Applicants, in the same paragraph, state that the teachings of Dean are directed "exclusively" to aerobic fermentations but that he also teaches anaerobic fermentations.

Art Unit: 1761

Applicant continues by stating that the fluidized bed process of Dean is wholly unsuitable for brewing beer because, in such a process, the medium is agitated. Applicant provides no evidence to support this statement.

A quick review of the patent literature shows, in USPN 5039630, the use of agitation in an immobilized yeast/wort fermentation. Further, USPN 5346706 discloses agitation of a yeast/wort mixture, and this is actually performed by injecting carbon dioxide in order to remove oxygen! Therefore, Dean would be relevant prior art to those in the brewing art.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
